

Jeremy Collins

Product Engineer & Builder

Los Angeles, CA

jeremycollins.net

jeremy@jeremycollins.net

SUMMARY

Product engineer and builder with 10+ years of experience creating customer-facing software across SaaS, education, creator, event, and marketing platforms.

Focused on identifying high-leverage opportunities through direct customer understanding, product intuition, analytics, experimentation, and rapid iteration.

Experienced leading initiatives across onboarding, activation, monetization, frontend architecture, and product growth. Currently focused on becoming a higher-impact builder: working directly with customers, developing product sense backed by data, and using agentic coding workflows to compress the distance between idea, implementation, and feedback.

CURRENT FOCUS

Working directly with customers to identify high-impact product opportunities.

Building product intuition backed by analytics, experimentation, and observed user behavior.

Using agentic coding and automation to increase builder leverage beyond traditional SDLC workflows.

Shipping smaller, faster, more measurable product iterations.

Creating systems that help small teams achieve outsized impact.

SELECTED IMPACT

Led growth-focused product initiatives spanning onboarding, activation, monetization, and experimentation.

Built customer-facing software across SaaS, education, creator, event, and marketing platforms.

Led frontend modernization and platform migration efforts across multiple organizations.

Developed analytics and experimentation workflows supporting data-informed product decisions.

Built and maintain independent developer tooling for mobile Safari through Codable.

EXPERIENCE

WEBFLOW

Senior Software Engineer

Aug 2022 to Present

Product engineer on growth-oriented initiatives focused on onboarding, activation, experimentation, and customer-facing product development.

Work across product, design, data, marketing, and engineering to identify opportunities and ship measurable improvements to user journeys.

Lead implementation of experiments and product changes from hypothesis through instrumentation, rollout, and iteration.

Contribute to analytics and data workflows that improve visibility into customer behavior and activation funnels.

Explore agentic coding workflows and automation as a way to increase product development leverage and reduce overhead in traditional engineering cycles.

Focus on building stronger customer feedback loops and product sense grounded in direct user understanding and data.

MASTERCLASS

Software Engineer

Apr 2022 to Aug 2022

Worked on Growth initiatives focused on payments, promotions, and subscription conversion.

Transitioned pre-paywall experiences from Rails-served React applications to Next.js.

Implemented and maintained experimentation infrastructure using Optimizely and internal testing systems.

HITRECORD

Senior Developer

Jul 2019 to Apr 2022

Led major frontend modernization efforts during platform relaunch.

Built learning platform systems including APIs, content models, customer experiences, and CMS tooling.

Worked across Angular, TypeScript, Ruby on Rails, NgRx, RxJS, XState, and frontend architecture.

Contributed through acquisition by MasterClass in 2022.

PLINK.AI

Software Engineer

Sep 2018 to Jul 2019

Worked across TypeScript, JavaScript, React, server-rendered applications, and Node-based APIs.

Built asset library functionality spanning multiple Node applications and React frontends.

Helped transition JavaScript codebases to TypeScript and led major dependency modernization efforts.

EVENT FARM

Software Engineer

Sep 2015 to Sep 2018

Led rewrite of legacy frontend into a modern Angular application while maintaining support for the existing AngularJS and jQuery application.

Directed UX overhaul of ticket management systems.

Built visual page-building tools supporting responsive web experiences and reusable templates.

ACT-ON

Junior Software Engineer

Jan 2015 to Sep 2015

Worked on the Content & Delivery team building WYSIWYG email, form, and webpage builders.

Added responsive design support for user-created content.

ACT-ON

Senior Solutions Engineer

Jun 2012 to Jan 2015

Delivered custom webpages, interactive scripts, and customer-facing implementation support.

Served in a hybrid professional services, developer relations, and technical implementation role.

PROJECTS

CODABLE

Founder & Developer

Jun 2017 to Present

Built and maintain a Safari-native iOS developer tool for inspecting, debugging, and testing web content on mobile devices.

Designed and implemented responsive viewport testing, DOM inspection, CSS manipulation, console output, network visibility, and JavaScript scratchpad workflows.

Own product design, development, release, support, and maintenance independently.

Published without monetization or tracking, reflecting a belief in useful independent software and open web tooling.

EDUCATION

UNIVERSITY OF CALIFORNIA, DAVIS

B.A. Communication and Political Science

TECHNOLOGIES

TypeScript, JavaScript, React, Next.js, Node.js, Ruby on Rails, Angular, GraphQL, SQL, ClickHouse, HTML, CSS, Git, experimentation platforms, analytics instrumentation.
